

Each box contains 30 ESSENTIALS packets containing:

- 1 Wild Bluegreen Body
- 1 Wild Bluegreen Mind
- 1 Acidophilus
- 1 Bifidus
- 1 Enzymes

WILD BLUEGREEN BODY

Organic Microalgae [*Aph. Flos-Aquae*]. Our own wild microalgae is the only edible freshwater algae in the world that grows abundantly in the wild, and is considered one of the most nutrient-dense foods on earth. Fed by mineral-rich waters and the region's abundant sunlight, Klamath Lake's wild microalgae is rich in phytonutrients, plant-based proteins, minerals, and essential fatty acids, as well as a wide spectrum of micronutrients, making it a profoundly nourishing food that provides a broad range of benefits.

WILD BLUEGREEN MIND

Wild Bluegreen Algae. Our own wild bluegreen is the only edible freshwater bluegreen algae in the world that grows abundantly in the wild, and is considered one of the most nutrient-dense foods on earth. Fed by mineral-rich waters and the region's abundant sunlight, Klamath Lake's wild bluegreen algae is rich in phytonutrients, plant-based proteins, minerals, and essential fatty acids, as well as a wide spectrum of micronutrients, making it a profoundly nourishing food that provides a broad range of benefits.

ACIDOPHILUS

Lactobacillus Acidophilus DDS-1. New Earth's Acidophilus contains a single pure strain of Lactobacillus acidophilus DDS®-1, which is specifically cultivated to promote intestinal health. Each two-capsule serving is manufacturer-guaranteed to supply at least 2.4 billion viable Lactobacillus acidophilus DDS®-1 cells. The acidophilus is microblended with Wild Bluegreen Algae to provide the live cells with optimal nourishment.

BIFIDUS

Bifidobacterium bifidum. Bifidobacterium bifidum is a type of beneficial bacteria that dwells naturally in the human gastrointestinal system, and especially in the lower GI tract. Each two-capsule serving is manufacturer-guaranteed to supply at least 3 billion viable Bifidobacterium bifidum cells at time of manufacture. The bifidus is microblended with Wild Bluegreen Algae to provide the live cells with optimal nourishment.

ENZYMES

Plant-Based Enzymes. With over 8,000 research papers produced annually on enzymes, the study of plant-based enzymes is broad and ongoing. At New Earth we are committed to the production of the finest enzyme formulations based on the most extensive evaluations of current science. Called the "new frontier of medicine," enzymes are involved in every metabolic process in the body and have far-reaching implications for their benefit to health and wellness.
